

# LogApp Release 4.1 (Build 4144)

## LogApp Release 4.1 (Build 4144)

**Release Date:** 23.10.2023

**Build:** 4144

**Update from older versions:** 4034 ServiceRelease4034

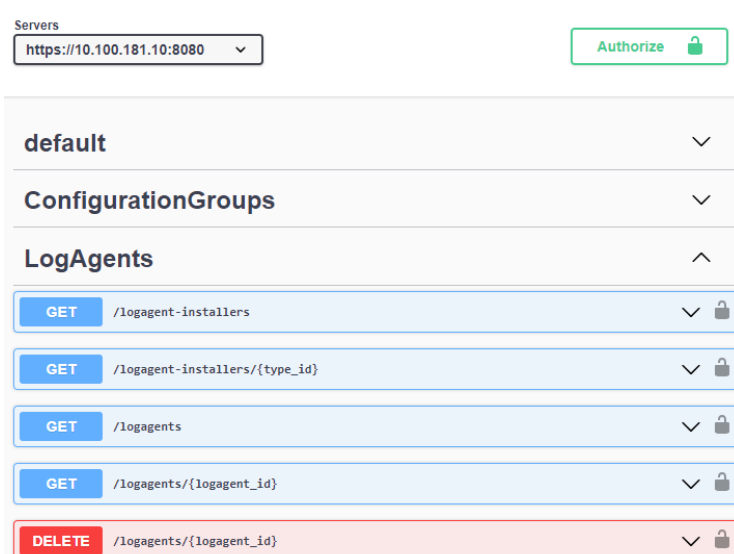

**LogAgents:** An agent update is necessary. The new version of the LogAgent is 4.1.27.

## New Features / Enhancements

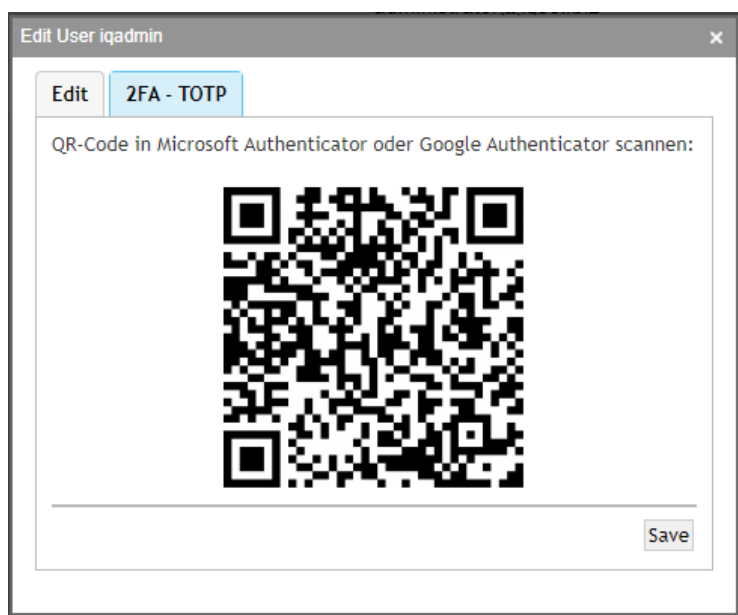

### 1. REST API

With this API it is possible to configure LogAgents, their configuration and alerts, and their configuration via a web request.

This allows you to automate tasks such as assigning configuration groups or switching modes of your LogAgents using your favourite automation tool.

### 2. Microsoft Authenticator & Google Authenticator TOTP

It is now possible to configure Microsoft Authenticator and Google Authenticator as second factor for logins.

### 3. New Alert Notification Options

The REST API Notification, SNMP Trap Notification and MS Teams Notification alert actions have been added.

With these actions it is possible to route an alert as a REST API call, as an SNMP trap or to route the alert as a message to an MS Teams chat or channel.
