

**iQSol HSA**  
**Hardware Security Appliance**

## iQSol HSA (Hardware Security Appliance)

The **iQSol HSA (Hardware Security App)** offers the possibility to provide a YubiHSM (Hardware Security Module) in your network for secure central creation and storage of certificates. Up to 16 applications/servers can be connected to one HSA. For this purpose, the YubiHSM will be divided into domains/partitions and each application/server only has access to its own private keys.

### Advantages of the iQSol HSA

- Simple, menu-driven configuration of the appliance and the YubiHSM
- Up to 16 applications/servers can be connected to one YubiHSM
- The applications/servers only need a network connection
- No physical USB port is required
- Easy creation of backups to a second YubiHSM via the integrated menu
- All logs can be sent (also encrypted) to a central syslog server
- Agent-based integration with iQSol LogApp
- Increased safety due to minimalistic system design

### Technical specifications

Dimensions (WxHxL): 210 x 44 x 297 mm | Format: Desktop

Power supply: 27W single, internal battery
